Double Serum Bag

Double Serum bag especially designed for patient's drug intravenous administration which must be diluted in physiological saline, ensuring total drug administration.

Description

A research group of Andalusian Public Health System (SSPA) has designed a double serum bag to perform both dilution of a drug such as cleaning intravenous infusion System.

Intellectual Property

This technology is protected by patent.

Advantages

Administering a drug to a patient by intravenous infusion system as it is used today, has a number of drawbacks as controlling the amount of serum to clean the system, check if you have performed cleaning or dilute the drug prior to its disposal.

This new Double Serum Bag:

1. Simplify the process of drug administration.
2. Minimize the volume of serum is administered to the patient during the cleaning operation of the infusion system.
3. Offers a faithful warranty as to whether there has been or cleaning infusion system.

Aims

The group is looking for a license agreement exploitation and / or collaboration.

Classification

Area: Medical Devices
Technology: Serum Bag
