Description

A research group from the Andalusian Public Health System has developed an electronic tool useful to know previous causes of urinary tract infections in real time in different clinical scenarios of care work. It consists of patterns of antibiotic sensitivity for predicting the usefulness of empirical treatments in each medium.

Intellectual Property

This technology is protected by Intellectual Property Registry.

Aims

The group is looking for a license agreement exploitation and / or collaboration.

Advantages

This software provides the following benefits:

1. Improve the treatment of patients with urinary tract infections.
2. Increase the rational use of antibiotics, reducing costs and undesirable effects and basing antibiotic policy.
3. Increase patient safety.
